Quantitative Inhabitation for Different Lambda Calculi in a Unifying Framework

First Goal

- **Decidability** of the (more general) **BANG** Inhabitation Problem (IP).

Coming Back to Inhabitation

First Goal + More Ambitious Second Goal

- **Decidability** of the (more general) **BANG** Inhabitation Problem (IP).
- **Decidability** of the **NAME** and **VALUE** IP from **decidability** of the **BANG** IP.

Coming Back to Inhabitation

First Goal + More Ambitious Second Goal

- **Decidability** of the (more general) **BANG** Inhabitation Problem (IP).
- **Decidability** of the **NAME** and **VALUE** IP from **decidability** of the **BANG** IP.

More Ambitious Third Goal

Coming Back to Inhabitation

First Goal + More Ambitious Second Goal

- **Decidability** of the (more general) **BANG** Inhabitation Problem (IP).
- **Decidability** of the **NAME** and **VALUE** IP from **decidability** of the **BANG** IP.

More Ambitious Third Goal

- Decidability by **finding all inhabitants** in the **BANG** IP.

Coming Back to Inhabitation

First Goal + More Ambitious Second Goal

- **Decidability** of the (more general) **BANG** Inhabitation Problem (IP).
- **Decidability** of the **NAME** and **VALUE** IP from **decidability** of the **BANG** IP.

More Ambitious Third Goal

- Decidability by **finding all inhabitants** in the **BANG** IP.
- Decidability of the **NAME** and **VALUE** IP by **finding all inhabitants** from those of the **BANG** IP.

Coming Back to Inhabitation

First Goal + More Ambitious Second Goal

- **Decidability** of the (more general) **BANG** Inhabitation Problem (IP).
- **Decidability** of the **NAME** and **VALUE** IP from **decidability** of the **BANG** IP.

More Ambitious Third Goal

- Decidability by **finding all inhabitants** in the **BANG** IP.
- Decidability of the **NAME** and **VALUE** IP by **finding all inhabitants** from those of the **BANG** IP.
- Using generic properties so that other encodable models of computation can use these results.

Solving the Inhabitation Problem - Methodology

Instead of **just one** solution:

$$\Gamma \vdash \mathbf{t} : \sigma$$

We want to compute **all** solutions:

$$\text{Sol}(\Gamma, \sigma) := \{ \mathbf{t} \mid \Gamma \vdash \mathbf{t} : \sigma \}$$

Solving the Inhabitation Problem - Methodology

Instead of **just one** solution:

$$\Gamma \vdash \mathbf{t} : \sigma$$

We want to compute **all** solutions:

$$\text{Sol}(\Gamma, \sigma) := \{ \mathbf{t} \mid \Gamma \vdash \mathbf{t} : \sigma \}$$

Solving the Inhabitation Problem - Methodology

Instead of **just one** solution:

$$\Gamma \vdash \mathbf{t} : \sigma$$

We want to compute **all** solutions:

$$\text{Sol}(\Gamma, \sigma) := \{ \mathbf{t} \mid \Gamma \vdash \mathbf{t} : \sigma \}$$

Problem

✗ The set $\text{Sol}(\Gamma, \sigma)$ is either **empty** or **infinite**

BANG

Solving the Inhabitation Problem - Methodology

Instead of **just one** solution:

README.md

An Implementation of the Quantitative Inhabitation Algorithm for Different Lambda Calculi in a Unifying Framework

This repository contains an implementation of the parametric algorithm Inb^c solving the inhabitation problem in ... and the article examples are ... with typing system \mathcal{U} . The algorithm was presented in ...

Properties of the Inhabitation Algorithm

Non-deterministic algorithm

Non-deterministic algorithm

Theorem

✓ The inhabitation algorithm *terminates*.

Non-deterministic algorithm

Theorem

- ✓ *The inhabitation algorithm terminates.*
- ✓ *The algorithm is **sound** and **complete** (i.e. it exactly computes $\text{Basis}_{\mathcal{B}}(\Gamma, \sigma)$).*

Non-deterministic algorithm

Theorem

- ✓ *The inhabitation algorithm terminates.*
- ✓ *The algorithm is sound and complete (i.e. it exactly computes $\text{Basis}_{\mathcal{B}}(\Gamma, \sigma)$).*

More Ambitious Third Goal

- ✓ Decidability by **finding all inhabitants** in the **BANG** IP.

Non-deterministic algorithm

Theorem

- ✓ *The inhabitation algorithm terminates.*
- ✓ *The algorithm is sound and complete (i.e. it exactly computes $\text{Basis}_{\mathcal{B}}(\Gamma, \sigma)$).*

More Ambitious Third Goal

- ✓ Decidability by **finding all inhabitants** in the **BANG** IP.
 - Decidability of the **NAME** and **VALUE** IP by **finding all inhabitants** from those of the **BANG** IP.
 - Using generic properties so that other encodable models of computation can use these results.

Theorem ([BKR'14])

✓ For any typing (Γ, σ) , $\text{Basis}_N(\Gamma, \sigma)$ **exists**, is **finite**, **correct** and **complete**.

NAME

Theorem ([BKR'14])

✓ For any typing (Γ, σ) , $\text{Basis}_{\mathcal{N}}(\Gamma, \sigma)$ **exists, is finite, correct and complete.**

NAME

Built an algorithm computing $\text{Basis}_{\mathcal{N}}(\Gamma, \sigma)$: [BKR'14]

$$\begin{array}{c}
 \frac{a \Vdash T(\Gamma + x : A, \tau) \quad x \notin \text{dom}(\Gamma)}{\lambda x. a \Vdash T(\Gamma, A \rightarrow \tau)} \text{ (Abs)} \\
 \\
 \frac{(\mathbf{a}_i \Vdash T(\Gamma_i, \sigma_i))_{i \in I} \quad \uparrow_{i \in I} \mathbf{a}_i}{\bigvee_{i \in I} \mathbf{a}_i \Vdash \text{TI}(+_{i \in I} \Gamma_i, [\sigma_i]_{i \in I})} \text{ (Union)} \\
 \\
 \frac{\Gamma = \Gamma_1 + \Gamma_2 \quad a \Vdash \text{H}^{x: [A_1 \rightarrow \dots A_n \rightarrow B \rightarrow \tau]}(\Gamma_1, B \rightarrow \tau) \quad b \Vdash \text{TI}(\Gamma_2, B) \quad n \geq 0}{ab \Vdash \text{H}^{x: [A_1 \rightarrow \dots A_n \rightarrow B \rightarrow \tau]}(\Gamma, \tau)} \text{ (Head}_{>0}\text{)} \\
 \\
 \frac{}{x \Vdash \text{H}^{x: [\tau]}(\emptyset, \tau)} \text{ (Head}_0\text{)} \\
 \\
 \frac{a \Vdash \text{H}^{x: [A_1 \rightarrow \dots A_n \rightarrow \tau]}(\Gamma, \tau)}{a \Vdash T(\Gamma + x : [A_1 \rightarrow \dots A_n \rightarrow \tau], \tau)} \text{ (Head)}
 \end{array}$$

Properties of the Indirect **NAME** and **VALUE** Algorithm

Theorem

- ✓ *The inhabitation algorithm terminates.*
- ✓ *The algorithm is sound and complete
(i.e. it exactly computes $\text{Basis}_{\mathcal{B}}(\Gamma, \sigma)$).*

BANG

Theorem

- ✓ The inhabitation algorithm terminates.
- ✓ The algorithm is sound and complete (i.e. it exactly computes $\text{Basis}_{\mathcal{B}}(\Gamma, \sigma)$).

BANG

More Ambitious Third Goal

- ✓ Decidability by **finding all inhabitants** in the **BANG** IP.
 - Decidability of the **NAME** and **VALUE** IP by **finding all inhabitants** from those of the **BANG** IP.
 - Using generic properties so that other encodable models of computation can use these results.

Theorem

- ✓ The inhabitation algorithm terminates.
- ✓ The algorithm is sound and complete (i.e. it exactly computes $\text{Basis}(\Gamma, \sigma)$).

More Ambitious Third Goal

- ✓ Decidability by **finding all inhabitants** in the **BANG** IP.
