## 1 Exercise 1

Give a rational expression for the following languages:
(1) $a^{-1}\left(b A^{*} \cup a a b A^{*}\right)$
(2) $a^{-1}\left(A^{*} a b a A^{*}\right)$
(3) $a^{-1}(a b a)^{*}$

## 2 Exercise 2

Consider the automaton $\mathcal{A}$ represented in Figure 1.

Figure 1: The automaton $\mathcal{A}$.
Give a rational expression for the language $L$ recognized by $\mathcal{A}$.

## 3 Exercise 3

Compute the transition monoid $M$ of the automaton $\mathcal{A}$ (Hint: you should find 12 elements). What are the idempotents of $M$ ?
Is $M$ an aperiodic monoid ? Is it commutative ?
Is $L$ star-free? Is it commutative?

## Solution

## 4 Exercise 1

(1) $a^{-1}\left(b A^{*} \cup a a b A^{*}\right)=a b A^{*}$
(2) $a^{-1}\left(A^{*} a b a A^{*}\right)=A^{*} a b a A^{*}+b a A^{*}$
(3) $a^{-1}(a b a)^{*}=b a(a b a)^{*}$

## 5 Exercise 2

A rational expression for $L$ is $\left(b+a a^{*} b a^{*} b\right)^{*}$. There are of course other solutions.

## 6 Exercise 3

The transition monoid $M$ is

|  |  | 1 | 2 | 3 |
| :---: | ---: | :---: | :---: | :---: |
| $*$ | 1 | 1 | 2 | 3 |
| $*$ | $a$ | 2 | 2 | 3 |
|  | $b$ | 1 | 3 | 1 |
|  | $a b$ | 3 | 3 | 1 |
|  | $b a$ | 2 | 3 | 2 |
|  | $b b$ | 1 | 1 | 1 |
|  | $a b a$ | 3 | 3 | 2 |
| $*$ | $b a b$ | 3 | 1 | 3 |
| $*$ | $b b a$ | 2 | 2 | 2 |
| $*$ | $b a b a b$ | 1 | 1 | 3 |
| $*$ | $b b a b$ | 3 | 2 | 3 |
|  | 3 | 3 | 3 |  |

## Relations $\quad a a=a \quad a b b=b b \quad b b b=b b \quad a b a b a=a \quad b a b a b=b \quad b b a b a=b b a b$

The idempotents are $1, a, b b, b b a, a b a b, b a b a, b b a b$. The monoid $M$ is not aperiodic since $(a b)^{3}=a b$, but $(a b)^{2} \neq a b$. Therefore, the language recognized by this automaton is rational but not star-free. It is not commutative since $a b \neq b a$ in $M$.
